

Download Challenging Inequities In Health From Ethics To Action

1. Definitions1.1 Social Determinants of Health Social determinants are the social and environmental conditions in which people live and work. Health equity refers to the study and causes of differences in the quality of health and healthcare across different populations. Health equity is different from health equality, as it refers only to the absence of disparities in controllable or remediable aspects of health. This paper addresses the distinctive nature of participatory action research (PAR) in relation to ethical review requirements. As a framework for conducting research and reducing health disparities, PAR is gaining increased attention in community and public health research.
