A bone is a rigid organ that constitutes part of the vertebrate skeleton. Bones protect the various organs of the body, produce red and white blood cells, store minerals, provide structure and support for the body, and enable mobility. The anatomy of the New Zealand tuatara has been examined extensively by anatomists and palaeontologists because it represents the only living member of the Rhynchocephalia, a group of reptiles that were successful during the time of the dinosaurs. Osteoarthritis (OA) is a type of joint disease that results from breakdown of joint cartilage and underlying bone. The most common symptoms are joint pain and stiffness. Initially, symptoms may occur only following exercise, but over time they may become constant. Other symptoms may include joint swelling, decreased range of motion, and, when ...
