Construction waste consists of unwanted material produced directly or incidentally by the construction or industries. This includes building materials such as insulation, nails, electrical wiring, shingle, and roofing as well as waste originating from site preparation such as dredging materials, tree stumps, and rubble. Building construction is the process of adding structure to real property or construction of buildings. The majority of building construction jobs are small renovations, such as addition of a room, or renovation of a bathroom. The construction industry experienced a surge in costs last month, which was largely driven by price increases for a wide range of building materials, according to data from the Associated General Contractors of America's (AGC's) labor department. Association officials caution that the Trump administration's newly-imposed tariffs on metal ...
