

Download Dependability Of Networked Computer Based Systems

A computer network is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. The ACM Conference on Embedded Networked Sensor Systems (SenSys 2019) is the premier computer systems conference focused on the architecture, design, implementation, and performance of networked sensing systems, sensor-oriented data modeling and analytics, and sensor-enabled applications. Vicia uses a decentralized approach to provide clear and dependable paging and voice evacuations capable of managing everyday functions and emergencies. As a student of this master's programme, you will develop a solid grasp of computer systems and networks through a broad, yet in-depth, training experience in the field of Computer Science and Engineering.
