

Download Section 5 3 Human Population Growth

Human height or stature is the distance from the bottom of the feet to the top of the head in a human body, standing erect. It is measured using a stadiometer, usually in centimetres when using the metric system, or feet and inches when using the imperial system. In the 20th century the world population increased from 1.5 billion to 6.1 billion. Now closing in on 8 billion, population growth is slowing. How has population growth varied across the world? How has population changed over our history? See global and country-level data. Terms. Age-sex structure: The composition of a population as determined by the number or proportion of males and females in each age category. The age-sex structure of a population is the cumulative result of past trends in fertility, mortality, and migration. Letters: Richard Vernon says population reduction would do more for the planet than a change of diet, Stuart Roberts and John Davies extol the benefits of British farming, Dr Michael Antoniou ...
